

Dimensions

Electrical connection

Model number

VAA-4E4A-KE-ZE/E2

KE switch cabinet module 4 inputs and 4 outputs

Features

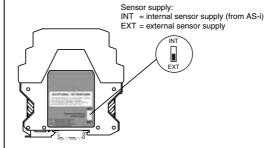

- Housing with removable, mechanical and color coded terminals
- · Communication monitoring
- Inputs for 2- and 3-wire sensors
- Addressing jack
- Power supply of outputs from the external auxiliary voltage
- Selectable supply to the sensors: External or from the module
- Function display for bus, external auxiliary voltage, internal sensor supply, inputs, and outputs

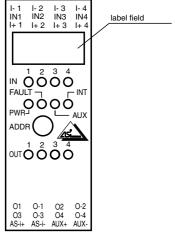

Switch position "EXT" EXT 4 inputs IN1 .. AS-Interface IN \bigoplus AS-Interface -EXT -O-* for 3-wire for 3-wire sensors sensors ADDR PWR 4 outputs O1 ... O4 FAULT AUX Load AUX + AUX

Indicating / Operating means

ATTENTION

Do not connect the terminals I+, IN and I- with any external potential when switch set to "INT"

Function

The VAA-4E4A-KE-ZE/E2 AS-Interface I/O module is a cabinet module with 4 inputs and 4 electronic outputs. The only 22.5 mm width housing requires not much space in the switch cabinet. The module is installed by snapping on the 35 mm DIN Rail in accordance with EN 50022.

The connection is made through plug-in terminals. For the inputs and outputs 4-way terminal blocks (black) are used. The connection of the external auxiliary supply and AS-Interface is made through the 2-wayterminal blocks (auxiliary supply gray, AS-Interface yellow). In order to avoid exchanges, the terminals for inputs and outputs are coded mechanically.

The power supply of the inputs and the connected sensors can be made as required via the internal supply of the module (AS-Interface) or via an external voltage source. The switching is carried out by means of a switch that is positioned at the side of the module. The selection of the internal input supply is indicated via the LED INT. The current switching state of each input and output is indicated by the resp. LED IN and OUT.

Note:

The device is equipped with a communication monitoring, which switches the outputs to their de-energized state, when there is no AS-Interface communication with the module for more than 40 ms.

An overloading of the internal input supply or of the outputs will be reported via the function 'peripheral error' to the AS-Interface master. The communication via the AS-Interface remains intact.

Compliance with standards and directives

Directive conformity		
EMC Directive 2004/108/EC	EN 61000-6-2:2005, EN 61000-6-4:2007, EN 50295:1999	
Standard conformity		
Noise immunity	EN 61000-6-2:2005	
Emitted interference	EN 61000-6-4:2007	
Input	EN 61131-2:2004	
Degree of protection	EN 60529:2000	
Fieldbus standard	EN 50295:1999, IEC 62026-2:2006	

Notes

Do not connect inputs and outputs, which are supplied via the module from AS-interface or via auxiliary power, with power supply and signal circuits with external potentials.
